

# Kabilan Vaikunthan

[kabilanvaikunthan@berkeley.edu](mailto:kabilanvaikunthan@berkeley.edu) | Berkeley, CA | [kvaikunthan.github.io](https://github.com/kvaikunthan)

---

## EDUCATION

---

**University of California, Berkeley**

Expected May 2028

*B.A. in Statistics, B.A. in Applied Mathematics*

*GPA: 4.0*

**Relevant Coursework:** Linear Algebra, Discrete Math, Structure and Interpretation of Computer Programs, Foundations of Data Science, Introduction to Real World Data Science

## WORK EXPERIENCE

---

**theCoderSchool**

Folsom, CA

*Code Coach*

August 2023 – August 2024

- Instructed 6-10 middle and high school students in Python, with a focus on cryptography, data analysis, and algorithm optimization; 3 students earned national recognition for their projects
- Developed curricula for AI and Intro to Computer Science coding camps, educating over 50 students

**California Department of Transportation**

Sacramento, CA

*Intern*

July 2023 – August 2023

- Collaborated with data scientists to model highway traffic flow through a Python regression script
- Cleaned 10,000+ data entries through a Pandas-powered script, increasing script accuracy by 10%
- Improved road closure efficiency by identifying key traffic congestion patterns and providing actionable insights

**Sacramento Valley Manufacturing Alliance**

Folsom, CA

*Intern*

May 2023 – July 2023

- Developed a local business listing website using WordPress and XAMPP, enabling educators to advertise training courses to business owners
- Automated SQL database backup procedure via Python, improving data security and reducing manual effort
- Documented the installation procedure and troubleshooting tips using Confluence to ensure smoother onboarding for future interns

## ACCOMPLISHMENTS & PROJECTS

---

**Eagle Scout** | Troop 134 of Folsom, CA

May 8th, 2024

- Designed and built 4 pressure-treated 4'x4' composting bins for food bank farm with cross-bracing for stability
- Raised over \$1,000 for materials through Christmas tree pickups and presentations at veteran posts
- Increased compostable leaf storage by 50% and minimized volunteer strain by designing bins with easy access points, minimizing bending and lifting

**Syllabus Scanner - SBHacks**

January 2025

- Engineered a Flask-based web application that streamlines syllabus management by extracting key information through LLM-powered document parsing, resulting in 90% reduction in manual review time
- Integrated Claude and Aryn's DocParse to automate extraction and summarization of course information
- Developed ETL pipeline for automatic event creation in Google Calendar from extracted dates, while maintaining user data privacy through React Context storage

**Locked.ai - CalHacks**

October 2024

- Developed a real-time focus-tracking website using Google MediaPipe, detecting gaze and eye closure through a laptop webcam to aid users in maintaining focus during tasks
- Interpolated calibration data to map gaze onto a computer screen, triggering phone vibrations if attention drifts or eyelids remain closed
- Visualized session data once done, providing users with insights into time spent focused and unfocused

## SKILLS

---

**Programming Languages & Development:** Python, SQL, Git

**Libraries and Frameworks:** OpenCV, Pandas, NumPy, Matplotlib, Keras, MediaPipe

**Tools:** Google Cloud Platform, Excel/Google Sheets
